

1970

NOV 3 0 1970

Honorable Maurice Stans
Secretary of Commerce
U. S. Department of Commerce
Washington, D. C. 20230

Dear Mr. Secretary:

In accordance with the provisions of Title 13, United States Code, section 141(b) and Title 2, United States Code, sections 2a and 2b, I transmit herewith a statement showing the population of each State and the District of Columbia on April 1, 1970, as ascertained by the Nineteenth Decennial Census of the United States, and the number of Representatives to which each State is entitled under the existing size of the House. This statement furnishes the information which the statute requires to be transmitted by the President to the 92nd Congress in the first week of its first regular session.

The total population of each State includes the resident population and armed services and civilian employees of the Federal Government overseas, as well as their dependents living with them. In 1960, and previously, only the resident population of each State was utilized for this computation.

The apportionment of Representatives for the 435 seats in the House shown in the statement is in accordance with the method of equal proportions, as prescribed in Title 2, United States Code.

Sincerely,

(Signed) George H. Brown

GEORGE H. BROWN
Director
Bureau of the Census

NOV 30 1970

The President
The White House
Washington, D. C. 20500

Dear Mr. President:

There is transmitted herewith a report from the Director of the Census including a statement showing the population of each State and the District of Columbia on April 1, 1970, as ascertained by the Nineteenth Decennial Census of the United States, and the number of Representatives to which each State is entitled under an apportionment of the existing number of Representatives by the method of equal proportions prescribed by law.

This report was prepared in accordance with the provisions of Title 13, United States Code, section 141(b), and Title 2, United States Code, sections 2a and 2b.

The report of the Director of the Census is submitted at this time in compliance with the law requiring that the Secretary of Commerce transmit to you by December 1 the tabulation of the total population by States. The law also provides that you transmit this information to the 92nd Congress during the first week of its first regular session.

Respectfully,

Secretary of Commerce

UNITED STATES DEPARTMENT OF
COMMERCE
NEWS

WASHINGTON, D.C. 20230

OFFICE
OF THE
SECRETARY

FINAL 1970 CENSUS FIGURES

The grand total population of the United States as of April 1, 1970 was 204,765,770. This includes United States armed forces stationed abroad and Federal Employees overseas as well as dependents of both living with them abroad. It also includes the population of the District of Columbia.

The resident population of the United States as of April 1, 1970 was 203,184,772.

Announcement of these final population figures of the 1970 Census was included in a message on the Census transmitted today by Commerce Secretary Maurice Stans to President Nixon. Mr. Stans was accompanied to the White House by Dr. George Hay Brown, Director of the Bureau of the Census.

The resident total is 13.3 percent higher than the 1960 Census figure of 179,323,175. Although the increase in resident population was the second largest of any decade in U.S. history, the percentage increase was nevertheless the second lowest - second only to the years of the Great Depression, the 1930's, when the increase was 7.3 percent.

Included with Secretary Stans' message to the President was a report showing the redistribution of U. S. Representatives in the Congress among the 50 States, based on their populations as of April 1, 1970, in accordance with present law.

The report, in the form of an apportionment table, shows that the State of California will gain 5 seats in the House of Representatives when Congress convenes for its 93rd session in January 1973. The gain will move California into the lead among the States in House representation with 43 members; New York, the loser of 2 seats, will drop to second place with 39 Representatives.

Other States which will gain seats are: Florida (3); and Arizona, Colorado and Texas (1 each).

Those losing seats, in addition to New York, are: Pennsylvania (2); and Alabama, Iowa, North Dakota, Ohio, Tennessee, West Virginia and Wisconsin (1 each).

(more)

The States with the greatest gains in number of people are California with 4.2 million; Florida, 1.8 million; Texas, 1.6 million; and, New York, 1.4 million. The greatest percentage gainers are Nevada with 71.3 percent; Florida, 37.1 percent; and Arizona, 36.1 percent.

Both of the Nation's newest States had increases above the national average. Alaska's increase was 33.6 percent while Hawaii had an 21.7 percent rise.

It is to be noted that the apportionment population total -- which is 204,002,799 -- is greater than the resident population total of the United States. The apportionment figure, which is used to allocate Representatives to the individual States, includes both the resident population and, for the first time, members of the U.S. Armed Forces abroad and employees of the Federal Government who are overseas together with dependents of these two groups living with them. For apportionment purposes, the District of Columbia is excluded from this total.

The report to President Nixon was prepared in accordance with the provisions of Title 13, U.S. Code, section 141(b), and Title 2, U.S. Code, sections 2a and 2b. The law stipulates the Secretary of Commerce must forward to the President the population of the 50 States as shown in the Census "...within 8 months of the Census date" and that the President must submit an apportionment report to Congress "...on the first day or within one week...of the first regular session" (of Congress)--- in this case, of the 92nd Congress which convenes in January 1971.

Congress, by law, has 15 days after receipt of the report from the President to act if it chooses to change the number of Representatives or the method of allocation.

If Congress takes no action within 15 days it, in effect, accepts the apportionment figures as submitted and the existing law as it applies to apportionment. The final step in this process is for the Clerk of the House of Representatives to inform the governors of the 50 States of the number of seats each will be entitled to fill in the 93rd and ensuing Congresses.

U. S. DEPARTMENT OF COMMERCE
Bureau of the Census

BACKGROUND FACT SHEET: PRESENT HIGHLIGHTS OF 1970 CENSUS

1. Fourteen States are being affected by reapportionment. Those gaining seats in the House of Representatives are: California (5); Florida (3); and Arizona, Colorado, and Texas (1 each). Those losing seats are: New York (2); Pennsylvania (2); and Alabama, Iowa, North Dakota, Ohio, Tennessee, West Virginia, and Wisconsin (1 each).
2. More than three-fourths of the national growth occurred in metropolitan areas with suburban rings showing rapid and substantial population growth. Suburbanites now outnumber those living in central cities.
3. Population in many central cities declined sharply. Declines also occurred in the decade of the 1950's, but the number of cities showing population losses in the 1960's appears to be greater than in the previous decade.
4. The farm population declined by approximately one-third since 1960, dropping from about 15 million to some 10 million.
5. About one-half of the Nation's counties lost population between 1960 and 1970. In an additional one-fourth of the counties, there was a low rate of growth. This was because there had been a net migration out of the county. Approximately two-thirds of the counties showing a decrease in the 1960's also had lost population between 1940 and 1960.
6. Migration patterns continued much as in the past -- from mid-country out, from rural to urban; coastal areas continued to grow.
7. California led all States in the amount of growth with a population increase of more than four million persons. Other States with large absolute gains -- Florida, Texas and New York.
8. Three States and the District of Columbia lost population during the decade. The States are West Virginia (which also lost population during the 1950's) North Dakota and South Dakota.

APPORTIONMENT OF REPRESENTATIVES IN CONGRESS

Under existing law the U. S. House of Representatives is made up of 435 members, apportioned among the States according to population, with each State having at least one member. Beginning with the census of 1940, apportionment of members among the States has been accomplished by applying the "Method of Equal Proportions." This method assures that the average number of persons per congressional district should be as nearly equal as possible.

The computation of the number of seats to which each State is entitled beyond the one guaranteed by the Constitution can most readily be done by a series of multiplications. For this purpose it is necessary to have only the total population to be taken into account for the apportionment, and a series of multipliers (derived from the formula given on the reverse of this page). Multiplying the population by the factor for each successive seat number in the State's delegation, provides a series of products known as priority values. These are arrayed in descending order and a list prepared. The State with the highest priority value gets the 51st seat, the next highest the 52nd seat, and so on. This is illustrated by these lines from the table prepared for 1970:

| <u>State</u> | <u>Priority value</u> | <u>No. in State delegation</u> | <u>Rank order</u> |
|--------------|-----------------------|------------------------------------|-----------------------|
| California | 14,212,042 | 2 | 51 |
| New York | 12,931,236 | 2 | 52 |
| ***** | | | |
| Oklahoma | 472,043 | 6 | 435 |
| Oregon | 471,991 | (5) | (436) |

Because the House is limited to 435 members, Oklahoma received the last seat; Oregon would have received its 5th seat only if the size of the House had been 436.

A fuller explanation is given in House Document 91-1314, The Decennial Population Census and Congressional Apportionment, issued July 20, 1970.

November, 1970

U.S. DEPARTMENT OF COMMERCE
Bureau of the Census

"The Population of the United States"

1. The Resident Population

All persons whose usual place of residence is within the 50 States and the District of Columbia, as well as those temporarily traveling or visiting outside the United States are included. Persons who did not have a usual place of residence as of the time of the census were counted at their location at that time. Each person in the resident population is associated with a specific address. Census population totals in counties, cities, and other areas within States and data showing characteristics of the American people refer to the resident population. This is the same approach as that followed in past censuses.

2. The Apportionment Population

The computation of congressional apportionment among the 50 States is based on the specially compiled "apportionment population" which consists of the resident population, plus the following persons who were abroad at the time of the census:

- (a) Members of the Armed Forces;
- (b) Civilian employees of any Federal department or agency (Defense Department, State Department, Peace Corps, Agency for International Development, U. S. Information Agency, etc.) who are citizens of the United States or who have a home State;

U.S. DEPARTMENT OF COMMERCE
Bureau of the Census

- (c) Spouses and children who are living abroad with persons classified in groups (a) and (b); and
- (d) Other relatives living abroad with persons in groups (a) and (b) who are citizens of the United States or have a home State.

The apportionment population is compiled only on a State total basis. Redistricting within the State will necessarily be done on the basis of the resident population.

12/7/70 FS

UNITED STATES DEPARTMENT OF
COMMERCE
NEWS

WASHINGTON, D.C. 20230

In response to requests from newsmen and other interested persons concerning the method of reapportionment of seats in the House of Representatives, Dr. Conrad Taeuber, Associate Director, Bureau of the Census, has written the following explanation.

REAPPORTIONMENT

Once every ten years the country faces the task of reapportionment-- that is, of determining how many seats each State should have in the House of Representatives. The Founding Fathers determined that Representatives were to be apportioned among the several States according to their respective numbers. Accordingly an enumeration has taken place once every 10 years, providing a sound basis for Congressional apportionment.

In the early years it was a relatively easy matter to make the periodic adjustment, in part by increasing the size of the House of Representatives. However, the size of the House has been held at 435 since 1912, with temporary exceptions when Hawaii and Alaska were admitted as States.

The problem is one of determining how most equitably to distribute the 435 seats among States which range in population from the 20 million of California to Alaska's 304 thousand. The Constitution provides that each State is entitled to at least one seat, regardless of its size. Thus, the first 50 seats are fixed. The question then is how to divide the other 385 in such

a way that the percentage difference in the population per Representative in any pair of States will be at a minimum.

A State either gets a second seat in the House, or it doesn't; there is no way of assigning a fractional Representative to a State, or of giving a Representative a fractional vote. Nor is there any way by which two States could share the same Representative.

There are a number of ways of distributing the 385 seats among the 50 States in the most equitable manner. Over the years, different ones have been tried. In 1941 the Congress adopted the method of equal proportions as the one to be followed thereafter. This method had been recommended by a Committee of the National Academy of Sciences which had been established at the request of Speaker of the House, Nicholas Longworth. It filed its report in 1929. The Committee pointed out that if fractional voting were permitted, each Congressman having a number of votes in proportion to the number of persons he represents, the matter would be a simple one. Since this is not the case, a method other than simply dividing the population of the State by the average number of persons per Representative would be required. The mathematical method known as the method of equal proportions was recommended by the Committee as the most equitable one. By this method, the proportional differences in the number of persons per Representative for any pair of States is at a minimum. They also felt that this method would be fair to the larger as well as the smaller States.

Priority Values

Making the computation is a relatively simple and straightforward

matter. The problem is to determine whether a given State is entitled to a second, third, etc., seat-- the first having been assigned automatically. In making this computation, the apportionment population of the State is multiplied by a decimal fraction which is given as $\frac{1}{\sqrt{n(n-1)}}$ ("n" is the number of seats for the State). The result of this multiplication is a number, which is called a priority value. For 1970, the priority value for the second seat for California is determined by multiplying the apportionment population, 20,098,863 by $\frac{1}{\sqrt{2(2-1)}}$ (or 0.707 10678). The result is 14,212,042. The computation is then done for New York, which involves multiplying New York's 18,287,529 by this same factor, 0.707 10678. The result is 12,931,236. This operation is repeated for every State. The result for Alaska is 215,008. To determine the priority value for the strength of California's claim to a third seat, one multiplies the population of the State by $\frac{1}{\sqrt{3(3-1)}}$ (or .408 24829). The result is a priority value of 8,205,326. This process can be repeated for every State for any desired number of seats. Thus, to determine the strength of California's claim to a 40th seat, the multiplier is $\frac{1}{\sqrt{40(40-1)}}$ (or .025 31848); the resulting priority value is 508,873. The priority value determines the strength of a State's claim to a second, third, fourth, etc., additional seat.

Obviously it will not be necessary to determine the strength of Alaska's claim to a 40th seat. The lowest priority value which is likely to establish a claim to a seat is in the vicinity of 470,000. This is approximately the average number of persons in the total population per seat in a House with

435 seats.

When the necessary priority values for all the States have been computed, they are arrayed in order, by size. California, with the largest priority value for a second seat, gets that seat, which is number 51 for the entire House. New York comes next in line with a second seat, which is number 52.

The first 10 and last 10 priority values and the States involved are:

| <u>Size of House</u> | <u>State</u> | <u>Size of State Delegation</u> | <u>Priority Value</u> |
|----------------------|----------------|-------------------------------------|-----------------------|
| 51 | California | 2 | 14212042 |
| 52 | New York | 2 | 12931236 |
| 53 | Pennsylvania | 2 | 8403479 |
| 54 | California | 3 | 8205326 |
| 55 | Texas | 2 | 7989449 |
| 56 | Illinois | 2 | 7908509 |
| 57 | Ohio | 2 | 7587397 |
| 58 | New York | 3 | 7465852 |
| 59 | Michigan | 2 | 6319552 |
| 60 | California | 4 | 5802042 |
| ----- | | | |
| 426 | Michigan | 19 | 483268 |
| 427 | Texas | 24 | 480908 |
| 428 | South Carolina | 6 | 477855 |
| 429 | Ohio | 23 | 477016 |
| 430 | South Dakota | 2 | 476058 |
| 431 | Illinois | 24 | 476036 |
| 432 | New York | 39 | 475041 |
| 433 | Florida | 15 | 473088 |
| 434 | California | 43 | 472947 |
| 435 | Oklahoma | 6 | 472043 |

Seat number 435 goes to Oklahoma. It is the 6th seat for the State. If the size of the House were only 60, California would have 4 seats; New York 3; Illinois, Michigan, Ohio, Pennsylvania, and Texas would each have 2, and

all other States would have only 1. By extending the computation, it becomes apparent that Oregon with an apportionment population of 2,110,810, has a priority value of 471,991 for its 5th seat. This would be seat number 436 in the House, and, therefore, Oregon does not get that seat. The question may well be asked whether this is fair in terms of the criterion set out, namely that the percentage difference in population per Representative should be the smallest possible for any pair of States.

Some Two-State Comparisons

Interest has been expressed in relation to the apportionment to Oklahoma and Connecticut. With 6 seats for Oklahoma, the average number of persons per Representative is 430,914. Connecticut also has 6 seats; its average is 508,449, which is 17.99 percent higher than the average for Oklahoma. If a seat were taken from Oklahoma and given to Connecticut, the difference in the number of persons per Representative would be 18.65 percent.

Another example: With 4 seats, Oregon has 527,702 persons per Representative. This is 22.46 percent greater than the average for Oklahoma. However, if a seat were taken from Oklahoma and given to Oregon, the difference would be 22.48 percent, which is slightly larger. In these instances the differences are not large, but the apportionment as reported yields a smaller difference than those for the arbitrary assignment used in this example.

As computed, California receives 43 seats, New York receives 39. The difference in the number of persons per Representative is less than 1 percent. However, if California were to receive only 42, while New York received 40, the difference would be 4.67 percent.

South Dakota receives 2 seats; North Dakota receives only 1. The difference is 85.2 percent. However, if the situation were reversed, North Dakota receiving 2 and South Dakota receiving only 1, the difference would be 115.72 percent.

In each of these comparisons the test is met; that is, the proportional difference between the numbers per Representative is smaller for the apportionment as computed than would be the case with the alternatives listed. A similar comparison could be carried out in relation to the number of Representatives per million of the population, and the results would be the same.

Persons per Representative

The fact that each State receives at least one seat regardless of its population size means that there will be some inequality among the States in respect to the number of persons per Representative. In the smaller States this number varies from 304,067 for Alaska to 624,181 for North Dakota. As the number of seats in a State is increased, the average number of persons per Representative approaches the national average. Among the States entitled to 10 or more seats, the average ranges only between 457,000 and 480,000.

Washington, D.C.

DEAR MR. PRESIDENT: There is transmitted herewith a report from the Director of the Census including a statement showing the population of each State and the District of Columbia on April 1, 1970, as ascertained by the Nineteenth Decennial Census of the United States, and the number of Representatives to which each State is entitled under an apportionment of the existing number of Representatives by the method of equal proportions prescribed by law.

This report was prepared in accordance with the provisions of title 13, United States Code, section 141(b), and title 2, United States Code, sections 2a and 2b.

The report of the Director of the Census is submitted at this time in compliance with the law requiring that the Secretary of Commerce transmit to you by December 1 the tabulation of the total population by States. The law also provides that you transmit this information to the 92d Congress during the first week of its first regular session.

Respectfully,

MAURICE H. STANS,

Secretary of Commerce.

Enclosure.

U.S. DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
OFFICE OF THE DIRECTOR,
Washington, D.C., November 30, 1970.

HON. MAURICE STANS,
Secretary of Commerce,
U.S. Department of Commerce,
Washington, D.C.

DEAR MR. SECRETARY: In accordance with the provisions of title 13, United States Code, section 141(b), and title 2, United States Code, sections 2a and 2b, I transmit herewith a statement showing the population of each State and the District of Columbia on April 1, 1970, as ascertained by the Nineteenth Decennial Census of the United States, and the number of Representatives to which each State is entitled under the existing size of the House. This statement furnishes the information which the statute requires to be transmitted by the President to the 92d Congress in the first week of its first regular session.

The total population of each State includes the resident population and armed services and civilian employees of the Federal Government overseas, as well as their dependents living with them. In 1960, and previously, only the resident population of each State was utilized for this computation.

The apportionment of Representatives for the 435 seats in the House shown in the statement is in accordance with the method of equal proportions, as prescribed in title 2, United States Code.

Sincerely,

GEORGE H. BROWN,
Director, Bureau of the Census.

Enclosure.

February 4, 1971

The Honorable Ronald Reagan
Governor
Sacramento, California

Dear Governor:

I have the honor to transmit herewith, a Certificate of Entitlement, attested by the Seal of the U. S. House of Representatives, showing the number of Representatives to which your State shall be entitled in the Ninety-Third Congress and in each Congress thereafter until the taking effect of a subsequent reapportionment under the law.

For your information I am also attaching copies of Section 22 of the Act as amended on November 15, 1941 that relates to apportionment of Representatives, and the message of the President of the United States of January 27, 1971, transmitting to Congress the 1970 population basis of apportionment, and the apportionment of Representatives by the method of equal proportions, pursuant to the provisions of the said Act.

With kind regards, I am

Sincerely,

W. PAT JENNINGS, Clerk
U. S. House of Representatives

Enclosure 1

Public Law 94-171
94th Congress, H. R. 1753
December 23, 1975

An Act

To amend section 141 of title 13, United States Code, to provide for the transmittal to each of the several States of the tabulation of population of that State obtained in each decennial census and desired for the apportionment or districting of the legislative body or bodies of that State, in accordance with, and subject to the approval of the Secretary of Commerce, a plan and form suggested by that officer or public body having responsibility for legislative apportionment or districting of the State being tabulated, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 141 of title 13, United States Code, is amended by adding at the end thereof the following new subsection:

“(c) The officers or public bodies having initial responsibility for the legislative apportionment or districting of each State may, not later than three years prior to the census date, submit to the Secretary a plan identifying the geographic areas for which specific tabulations of population are desired. Each such plan shall be developed in accordance with criteria established by the Secretary, which he shall furnish to such officers or public bodies not later than April 1 of the fourth year preceding the census date. Such criteria shall include requirements which assure that such plan shall be developed in a nonpartisan manner. Should the Secretary find that a plan submitted by such officers or public bodies does not meet the criteria established by him, he shall consult to the extent necessary with such officers or public bodies in order to achieve the alterations in such plan that he deems necessary to bring it into accord with such criteria. Any issues with respect to such plan remaining unresolved after such consultation shall be resolved by the Secretary, and in all cases he shall have final authority for determining the geographic format of such plan. Tabulations of population for the areas identified in any plan approved by the Secretary shall be completed by him as expeditiously as possible after the census date and reported to the Governor of the State involved and the officers or public bodies having responsibility for legislative apportionment or districting of such State, except that such tabulations of population of each State requesting a tabulation plan, and basic tabulations of population of each other State, shall, in any event, be completed, reported and transmitted to each respective State within one year after the census date.”.

Population,
tabulation
for state
legislative
apportionment,
Plan.

Sec. 2. (a) The heading for section 141 of title 13, United States Code, is amended by adding at the end thereof the following: "; tabulation for legislative apportionment".

(b) The table of sections for chapter 5 of title 13, United States Code, is amended by striking out the item relating to section 141 and inserting in lieu thereof the following:

"141. Population, unemployment, and housing; tabulation for legislative apportionment."

Approved December 23, 1975.

OFFICE OF THE WHITE HOUSE PRESS SECRETARY

THE WHITE HOUSE

PRESS CONFERENCE
OF

THE HON. MAURICE H. STANS, SECRETARY OF
COMMERCE; DR. GEORGE HAY BROWN, DIRECTOR
OF THE BUREAU OF THE CENSUS, AND CONRAD
F. TAEUBER, ASSOCIATE DIRECTOR FOR DEMO-
GRAPHIC FIELDS

AT 12:24 PM EST

MR. ZIEGLER: The Secretary of Commerce, Secretary Stans, and the Director of the Bureau of the Census, Dr. George Brown, met with the President this morning for the purpose of presenting him with the results of the 1970 Census. You have material on that.

Secretary Stans and Dr. Brown are here to take your queries on the 1970 Census data.

Prior to that, I think Secretary Stans may have a few brief remarks.

SECRETARY STANS: The law requires the Director of the Census to certify to the Secretary of Commerce and the Secretary of Commerce to certify to the President by December 1 of each year. Today, of course, is the last day before that date. So I have presented to the President the certifications and the figure which has already been shown to the photographers in the President's office. This is the figure. (Indicating)

The papers which you have show the figures by states compared with 1960. They show the changes in the Congressional delegations as a result of the count. I would just like to say two things about the figures, and then Dr. Brown or I, or Conrad Taeuber, Associate Director of the Bureau, will answer any questions you wish to ask us.

First, this is the first time the Census has included a count of Americans overseas in the Armed Services and in the government services in other countries. They amount to about a million-and-a-half people.

Secondly, those of us who have had anything to do with this operation believe that it is a highly accurate work, much more so than the previous Census of 1960, or, for that matter, for any of the previous Censuses, not only because of the inclusion of those overseas, but because of the increased number of techniques that were used.

There have been complaints, as you know, in a number of cities and towns that the Census was not complete and was not accurate.

Approximately 500 communities have been checked out

END MORE

with a total campaign on the basis of "Were you counted?" That included advertising, promotion by local authorities, school children taking forms home, newspapers and press reports, and so forth, asking people who hadn't been counted to come forward.

The result of that in approximately 500 communities is that we have checked out approximately 30 million people and in that process have located 15,000 that were missed by the Census. In other words, as a result of all the complaints, the Census has been found to be accurate to within five people out of every 10,000, which I believe is 1/20th of one percent.

This process was done in the City of Washington and disclosed practically no additions. It was done in the City of Baltimore, where the city made a very close check of two areas in the so-called ghetto, the most difficult areas, and came up, after adjustment, with less people than the Census had actually counted.

So we have every reason to believe that every valid complaint across the country has been checked out.

The Bureau of the Census has worked with the authorities in every case in a campaign to get people to come forward if they thought they hadn't been counted. As a result we found very, very few.

I think, therefore, that we will stand on our statement that this is the most accurate Census ever taken.

If there are any questions you have of me, Dr. Brown or Mr. Taeuber --

Q Mr. Secretary, the preliminary figures indicated that Connecticut would pick up a Congressional seat and Oklahoma would lose one. Can you tell us why the final figures do not show that?

SECRETARY STANS: The final figures do not show that because of the addition of the people overseas who are residents or were residents of Connecticut and who were apportioned back to the state were considerably less in proportion, as you will see from the figures, than the people of Oklahoma, which is the state that would have lost one.

When those figures are all put together, Connecticut does not gain a seat and Oklahoma does not lose one.

Q I don't understand why you say Oklahoma didn't lose one.

SECRETARY STANS: Early estimates that appeared in the press on the basis of the preliminary figures indicated that Connecticut would gain a seat and that Oklahoma would lose one.

The final figures show that is not the case. Connecticut is unchanged and Oklahoma is unchanged. This

MORE

MR. TAEUBER: Congress has never prescribed precisely what is meant by this term, the low number of persons. This was discussed with the Congressional committee to which we report, and they were in agreement -- this is well over a year ago, I believe -- that what should be done for this purpose is to do exactly what we did.

Q How can it be the most accurate Census ever if your count falls about a half million below that which you had said was in the country based on the 1960 Census and births and deaths since then?

MR. TAEUBER: We have the same problem with making estimates that other people have. What you are referring to is an estimate and is an estimate that is going to have to be trued up in the light of the Census figures.

Estimates are bound to be subject to error. Part of our problem now is going to be to find out to what extent and why our estimates went wrong, and try to do better on the next round.

Q Mr. Secretary, has the President yet had a chance to digest some of the main conclusions of this and maybe indicate some thoughts about future policy, particularly the fact that suburbs are growing and the center cities and farms are losing population?

SECRETARY STANS: I don't think that has come to the President's attention in any great detail. When the preliminary figures were out, we reported to him the movements from the center of the country to the coasts. Matters like that have been discussed in a very general way in the Domestic Council meetings.

But I don't believe that there has been any detailed report because we were all waiting for the final figures. All of this will now be put together in the manner you suggest.

Q Mr. Secretary, what is the average size of a Congressional district under the 1970 Census? How many people should there be ideally in a district?

DR. BROWN: It is about 470,000. It won't be precisely the same because of the fact that each state gets one Congressman regardless of its size. When you are dealing with small states that have two representatives or three representatives, you can get some variation from the national average. As you get into the larger states, they approach the national average pretty closely.

Q How big a population switch would have been necessary to give Connecticut that extra seat and take it away from Oklahoma?

DR. BROWN: I haven't worked out that particular calculation. It is not a large number, but it is an appreciable one.

Q And where is the California gain? Is it all Southern California?

DR. BROWN: You are talking about redistricting. That will have to be determined by the state under the one man, one vote as they apportion those districts. They will go where the population is, which is largely in the metropolitan areas and the suburban rings around the metropolitan areas.

Q Mr. Secretary, there has been a good deal of interest both by people in the Federal Government, governors, mayors and others in having a Census more often. I understand there was a bit of byplay when you reported to the President. What is your feeling about a five-year or more frequent Census, or what does the President feel about it?

SECRETARY STANS: The byplay centered on the fact when I told the President this Census cost approximately \$200 million. He shuddered, I guess, at the thought of \$200 million in the 1975 budget.

The Administration has already approved and indicated to the Congress its endorsement of the idea of a five-year Census. We have not yet determined the extent to which the procedures in that interim Census might be simplified or shortcut or the use of sampling methods.

Therefore, we don't know whether it will cost as much as the ten-year Census or not, but probably it would cost somewhat less.

Q What the President objected to was the cost of the whole thing, not the idea of the more frequent Census?

SECRETARY STANS: Right.

Q A moment ago you mentioned Connecticut with relation to Oklahoma.

SECRETARY STANS: Only insofar as that had been reported in the press on the basis of the preliminary figures.

MORE

Q But in your handout you have Oregon would have been the next one. So it isn't Connecticut but it would have been Oregon, is that right?

DR. BROWN: That is on the basis of the size of the House to be increased. Oregon would be the next one. The next one we are talking about on Connecticut-Oklahoma was the difference between our preliminary counts and final count. They are two quite different things.

SECRETARY STANS: Oregon would only have come in if there had been 436 Representatives.

Q Did I understand you to say a while ago that 470,000 was going to be the national average for the Congressional population?

DR. BROWN: About that, yes.

Q How do you justify Oklahoma, ~~then~~, with six Congressmen? You take the total population of Oklahoma and how can you get six Congressmen out of that?

DR. BROWN: Remember, I said you will not get 470,000 per seat.

Q I remember you said it.

DR. BROWN: That is the reason I said it. When you get to the small States you will not get the national average.

SECRETARY STANS: Each State gets one.

DR. BROWN: Each State gets one to start with.

Q Aren't you supposed to get the national average on the basis of the Supreme Court decision?

DR. BROWN: The method of assigning the seats to the various States is a formula which is spelled out in the press package which gives a priority position on each seat, which is a function of the size of the State and the calculations that have been worked out. This procedure has been approved by the Congress and we are directed to use it.

When we apply this particular method it comes out with these particular answers. We are not told to get the exact same number of persons per seat in every State.

SECRETARY STANS: If you take Oklahoma's six and take the one that they get anyway and divide the two and a half million people by five, you get an average of 500,000. It comes close enough.

Q You are giving each State one?

DR. BROWN: Every State gets one to start with regardless of its size.

Q Who determines that, that you start out with each State getting one before you start dividing the population,

which clearly favors all the small States, not just the smallest?

DR. BROWN: This is an act of Congress, and I believe it is in the Constitution, which says that each State must have at least one.

Q I understand, sir. But that is different than giving each State one before you start dividing population.

DR. BROWN: That is correct. But that is in the statute, the procedure which says each State will be assigned one and then you will use the method of equal proportion to determine the priorities for the assignment of the remaining -- well, you start with the 51st seat and make the assignments.

Q You may have answered this question earlier. Wisconsin gained about 11.8 percent in population but lost one seat. There were a number of States that gained less in population and didn't lose a seat.

How does that happen?

DR. BROWN: This is the fact that we have to assign a whole person as a Congressman. You can't assign a fraction of a person. In the way the arithmetic works out, you will gain or lose on the basis of this precise method. It gives you the exact assignment and then after you have done that one you can work out the arithmetic as to how many persons per Representative there are.

Q What was your preliminary figure for California? Do you have that there? Was that a resident or overall total in the preliminary?

DR. BROWN: That was the resident population that we gave you at the time of the preliminary because we had not at that time gotten to the armed services and the other people overseas.

Q Can I get the other answer?

MR. TAEUBER: It was 19,715,490.

Q What is the consensus among the Census Bureau now as to how many people were missed in the 1960 Census?

DR. BROWN: The figure we have been using is the three percent or approximately five million people. This was evolved over the study that was done since the 1960 Census. Until we get a chance to go back and restudy the entire situation, which we now plan to do, that is the best estimate we have.

Q Dr. Brown, what was the final upshot of the New York City complaint where at one point they charged that as many as 500,000 people were missed? What was the final result of that?

MORE

DR. BROWN: The final result was that the population for the city was very close to what it had been in 1960 and not the 500,000 lower as had been rumored. Where that rumor came from or where that information came from, I don't know, and still don't. But it turned out not to be correct by about 500,000.

Q Dr. Brown, if my figures are correct, in the preliminary figures for Utah showing a gain of 19.1. That is one State where you overestimated, the final figure being 18.9.

DR. BROWN: This is quite correct. As we tried to make clear when we issued the preliminary figures, they are preliminary. They are subject to change and correction as we go through the process of refining our work.

Q Is there any explanation as to why there was the overestimate in Utah?

DR. BROWN: I can't tell you why specifically. It just was.

Q Mr. Stans, there has been a lot of talk about changes in the Cabinet. Are you staying on as Commerce Secretary?

SECRETARY STANS: That is my intention. I have heard nothing to the contrary from anyone and I have no intention of doing anything except to stay here as long as I can be helpful to the President.

Q Mr. Stans, while we are here, would you straighten us out on this Small Business Administration? Is the Economic Development Administration of your Department going over to Small Business or is Small Business coming over to you? Are we going to have a merger here or what?

SECRETARY STANS: So far as I know, this is one of a number of alternative suggestions being made or may be made by the President's Advisory Council on Minority Enterprise. The report is not out.

A number of other alternatives appeared in a preliminary draft of their report. I don't know what they are going to conclude. I don't know how many alternatives they will give or which alternative will be the most useful one or the one accepted by the President. It is in a very preliminary state.

THE PRESS: Thank you, gentlemen.

END (AT 12:45 P.M. EST)

FOR RELEASE ON DELIVERY

1970 CENSUS FINAL NATIONAL AND STATE
TOTALS AND CONGRESSIONAL REAPPORTIONMENT STATISTICS

The following is a summary list of the news material contained in this press packet:

1. General news release on population and apportionment.
2. Background fact sheet.
3. Apportionment table.
4. Apportionment map.
5. Table changes in Congressional representation by region, comparing 1960.
6. Alphabetic tables on State population changes 1960 - 1970.
7. Table by State total population rankings.
8. Map of percentage change by States.
9. Table showing population changes by region.
10. Written explanation on apportionment.
11. Written explanation of the resident and apportionment population counts.

UNITED STATES DEPARTMENT OF
COMMERCE
NEWS
WASHINGTON, D.C. 20230

OFFICE
OF THE
SECRETARY

FINAL 1970 CENSUS FIGURES

The grand total population of the United States as of April 1, 1970 was 204,765,770. This includes United States armed forces stationed abroad and Federal Employees overseas as well as dependents of both living with them abroad. It also includes the population of the District of Columbia.

The resident population of the United States as of April 1, 1970 was 203,184,772.

Announcement of these final population figures of the 1970 Census was included in a message on the Census transmitted today by Commerce Secretary Maurice Stans to President Nixon. Mr. Stans was accompanied to the White House by Dr. George Hay Brown, Director of the Bureau of the Census.

The resident total is 13.3 percent higher than the 1960 Census figure of 179,323,175. Although the increase in resident population was the second largest of any decade in U.S. history, the percentage increase was nevertheless the second lowest - second only to the years of the Great Depression, the 1930's, when the increase was 7.3 percent.

Included with Secretary Stans' message to the President was a report showing the redistribution of U. S. Representatives in the Congress among the 50 States, based on their populations as of April 1, 1970, in accordance with present law.

The report, in the form of an apportionment table, shows that the State of California will gain 5 seats in the House of Representatives when Congress convenes for its 93rd session in January 1973. The gain will move California into the lead among the States in House representation with 43 members; New York, the loser of 2 seats, will drop to second place with 39 Representatives.

Other States which will gain seats are: Florida (3); and Arizona, Colorado and Texas (1 each).

Those losing seats, in addition to New York, are: Pennsylvania (2); and Alabama, Iowa, North Dakota, Ohio, Tennessee, West Virginia and Wisconsin (1 each).

(more)

The States with the greatest gains in number of people are California with 4.2 million; Florida, 1.8 million; Texas, 1.6 million; and, New York, 1.4 million. The greatest percentage gainers are Nevada with 71.3 percent; Florida, 37.1 percent; and Arizona, 36.1 percent.

Both of the Nation's newest States had increases above the national average. Alaska's increase was 33.6 percent while Hawaii had an 21.7 percent rise.

It is to be noted that the apportionment population total — which is 204,002,799 — is greater than the resident population total of the United States. The apportionment figure, which is used to allocate Representatives to the individual States, includes both the resident population and, for the first time, members of the U.S. Armed Forces abroad and employees of the Federal Government who are overseas together with dependents of these two groups living with them. For apportionment purposes, the District of Columbia is excluded from this total.

The report to President Nixon was prepared in accordance with the provisions of Title 13, U.S. Code, section 141(b), and Title 2, U.S. Code, sections 2a and 2b. The law stipulates the Secretary of Commerce must forward to the President the population of the 50 States as shown in the Census "...within 8 months of the Census date" and that the President must submit an apportionment report to Congress "...on the first day or within one week...of the first regular session" (of Congress)--- in this case, of the 92nd Congress which convenes in January 1971.

Congress, by law, has 15 days after receipt of the report from the President to act if it chooses to change the number of Representatives or the method of allocation.

If Congress takes no action within 15 days it, in effect, accepts the apportionment figures as submitted and the existing law as it applies to apportionment. The final step in this process is for the Clerk of the House of Representatives to inform the governors of the 50 States of the number of seats each will be entitled to fill in the 93rd and ensuing Congresses.

U. S. DEPARTMENT OF COMMERCE
Bureau of the Census

BACKGROUND FACT SHEET: PRESENT HIGHLIGHTS OF 1970 CENSUS

1. Fourteen States are being affected by reapportionment. Those gaining seats in the House of Representatives are: California (5); Florida (3); and Arizona, Colorado, and Texas (1 each). Those losing seats are: New York (2); Pennsylvania (2); and Alabama, Iowa, North Dakota, Ohio, Tennessee, West Virginia, and Wisconsin (1 each).
2. More than three-fourths of the national growth occurred in metropolitan areas with suburban rings showing rapid and substantial population growth. Suburbanites now outnumber those living in central cities.
3. Population in many central cities declined sharply. Declines also occurred in the decade of the 1950's, but the number of cities showing population losses in the 1960's appears to be greater than in the previous decade.
4. The farm population declined by approximately one-third since 1960, dropping from about 15 million to some 10 million.
5. About one-half of the Nation's counties lost population between 1960 and 1970. In an additional one-fourth of the counties, there was a low rate of growth. This was because there had been a net migration out of the county. Approximately two-thirds of the counties showing a decrease in the 1960's also had lost population between 1940 and 1960.
6. Migration patterns continued much as in the past -- from mid-country out, from rural to urban; coastal areas continued to grow.
7. California led all States in the amount of growth with a population increase of more than four million persons. Other States with large absolute gains -- Florida, Texas and New York.
8. Three States and the District of Columbia lost population during the decade. The States are West Virginia (which also lost population during the 1950's) North Dakota and South Dakota.

APPORTIONMENT OF REPRESENTATIVES IN CONGRESS

Under existing law the U. S. House of Representatives is made up of 435 members, apportioned among the States according to population, with each State having at least one member. Beginning with the census of 1940, apportionment of members among the States has been accomplished by applying the "Method of Equal Proportions." This method assures that the average number of persons per congressional district should be as nearly equal as possible.

The computation of the number of seats to which each State is entitled beyond the one guaranteed by the Constitution can most readily be done by a series of multiplications. For this purpose it is necessary to have only the total population to be taken into account for the apportionment, and a series of multipliers (derived from the formula given on the reverse of this page). Multiplying the population by the factor for each successive seat number in the State's delegation, provides a series of products known as priority values. These are arrayed in descending order and a list prepared. The State with the highest priority value gets the 51st seat, the next highest the 52nd seat, and so on. This is illustrated by these lines from the table prepared for 1970:

| <u>State</u> | <u>Priority value</u> | <u>No. in State delegation</u> | <u>Rank order</u> |
|--------------|-----------------------|------------------------------------|-----------------------|
| California | 14,212,042 | 2 | 51 |
| New York | 12,931,236 | 2 | 52 |
| ***** | | | |
| Oklahoma | 472,043 | 6 | 435 |
| Oregon | 471,991 | (5) | (436) |

Because the House is limited to 435 members, Oklahoma received the last seat; Oregon would have received its 5th seat only if the size of the House had been 436.

A fuller explanation is given in House Document 91-1314, The Decennial Population Census and Congressional Apportionment, issued July 20, 1970.

November, 1970

U.S. DEPARTMENT OF COMMERCE
Bureau of the Census

"The Population of the United States"

1. The Resident Population

All persons whose usual place of residence is within the 50 States and the District of Columbia, as well as those temporarily traveling or visiting outside the United States are included. Persons who did not have a usual place of residence as of the time of the census were counted at their location at that time. Each person in the resident population is associated with a specific address. Census population totals in counties, cities, and other areas within States and data showing characteristics of the American people refer to the resident population. This is the same approach as that followed in past censuses.

2. The Apportionment Population

The computation of congressional apportionment among the 50 States is based on the specially compiled "apportionment population" which consists of the resident population, plus the following persons who were abroad at the time of the census:

- (a) Members of the Armed Forces;
- (b) Civilian employees of any Federal department or agency (Defense Department, State Department, Peace Corps, Agency for International Development, U. S. Information Agency, etc.) who are citizens of the United States or who have a home State;

U.S. DEPARTMENT OF COMMERCE
Bureau of the Census

- (c) Spouses and children who are living abroad with persons classified in groups (a) and (b); and
- (d) Other relatives living abroad with persons in groups (a) and (b) who are citizens of the United States or have a home State.

The apportionment population is compiled only on a State total basis. Redistricting within the State will necessarily be done on the basis of the resident population.

Source: 1970 Census of Population, Volume 1, *Characteristics of the Population, Number of Inhabitants, United States Summary, table A.*

¹Includes U.S. military and Federal civilian employees and their dependents who were living in (1) a U.S. commonwealth or territory and reported a home State or (2) a foreign country and were U.S. citizens or reported a home State.

²Differs from the population of 203,211,926 shown in the detailed 1970 census tables because of revisions made after the tabulations were completed.

³The population of the District of Columbia is not included in the apportionment population.
